PROFILE

- Software engineer who ships full-stack, AI-powered products and the automation behind them, end to end and with minimal direction: Go/PostgreSQL and FastAPI backends, React/TypeScript and Next.js frontends, RAG and LLM integrations, and the CI/CD and infrastructure that deploy and monitor it all. Founding engineer experience taking a platform from zero to production; builds AI-native, using AI-assisted workflows to move at a pace beyond typical solo output. Autonomous, detail oriented, and used to owning platform-level work rather than isolated tickets.

EXPERIENCE

Junior Software Developer

May 2026 – Present

GoMyCode

Tunisia, Remote

- Ship features across the GoMyAcademy Go and PostgreSQL backend and React and TypeScript frontend, turning user feedback into shipped fixes that helped drive signups from roughly 100 to 5,000 in the first week after a relaunch.
- Own scope and delivery directly with product and engineering teams, working platform wide rather than on isolated tickets.

Software Engineering Intern

Feb 2026 – May 2026

GoMyAcademy @ GoMyCode, Tunis

- Built the GoMyAcademy platform from zero as founding engineer, owning the Go backend, PostgreSQL and Redis data layer, and the React and TypeScript frontend.
- Built a context aware AI tutor using a Retrieval Augmented Generation pipeline over pgvector, integrating Gemini, OpenAI, and Anthropic models.
- Deployed the platform on GCP, with Google Cloud Storage for media and Vercel for frontend hosting.

Freelance Full-Stack Developer

2024 – Present

AI Automation & Marketing

Remote

- Designed and built AI powered workflows and automations for clients, saving hours of manual work per week through Python scripting and process automation.
- Built business dashboards with Power BI and Metabase, turning raw sales data into decisions clients can act on.

Software Development Intern

Jul 2025 – Aug 2025

BH-Dashboard @ BH Bank

Hybrid

- Built a centralized dashboard MVP using Next.js, TypeScript, Docker, and Supabase to unify apps, projects, and deployments, improving visibility and decision-making.
- Added modules for project tracking, approvals, and automated EOL/contract alerts to reduce incident time and service risks.

PROJECTS

End-to-End MLOps Pipeline for EV Demand Forecasting

2025

- Designed a modular Python ML pipeline for hourly energy forecasting, automating ingestion, feature engineering, and training of multiple models with automatic production promotion via a file-based registry.
- Deployed a Dockerized FastAPI inference service with Prometheus/Grafana observability, and a serverless batch inference system using S3 events, plus a GitHub Actions CI/CD workflow.

AI Grading Evaluation Pipeline

2026

- Built a modular Python evaluation pipeline comparing LLM generated grades with human instructor grades, with local LLM grading via Ollama, strict JSON outputs, and fallback handling.
- Implemented automated metric computation (MAE, RMSE, accuracy) and artifact versioning with structured logging and Makefile workflows.

E-Commerce Sales Analytics Platform

2025

- Built a fully automated workflow turning merchant sales data into dashboards, forecasts, and AI generated insights using Python, FastAPI, Pandas, and scikit-learn, containerized with Docker and deployed on AWS.

Event-Driven Kubernetes Autoscaler

2025

- Developed a Python-based controller to scale Kubernetes pods based on SQS queue message counts, with a GitHub Actions CI/CD workflow for linting, builds, and deployment.

SKILLS

Languages: Python, SQL, TypeScript, JavaScript, Go

Data & Analytics: Pandas, NumPy, scikit-learn, XGBoost, LightGBM, Matplotlib, Seaborn, Power BI, Metabase

AI & LLM: Claude, ChatGPT, Cursor, Codex, OpenAI API, Anthropic API, Gemini, RAG, Ollama

Backend & Data Platform: FastAPI, PostgreSQL (pgvector), REST APIs, Supabase, Redis

Cloud & DevOps: AWS (S3, Lambda), GCP, Docker, Kubernetes, GitHub Actions, CI/CD, Linux, Prometheus, Grafana

EDUCATION

Bachelor’s Degree in Computer Science	2023 – 2026
<i>Higher Institute of Computer Science</i>	<i>Ariana</i>

CERTIFICATIONS

Google Data Analytics Professional Certificate [View Certificate]	Jan 2026
CCNA 1, Introduction to Networks [View Certificate]	2025

LANGUAGES

Arabic (native)

English (C1 IELTS)

French (professional proficiency)
